DETAILED ACTION

Amendment

1. Acknowledgement is made of Amendment filed 29 December 2003.

Drawings

2. New corrected drawings are required in this application because the set of drawings filed 27 March 2001 is informal, unclear, and hard-to-read, etc.; therefore, a formal set of drawings is required. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Allowable Subject Matter

3. Claims 1-4, 6-20, 25-37, 39 and 41-42 are allowed.
4. The following is an examiner's statement of reasons for allowance:

The record of prior art fails to teach a data collection assembly, including: a) a support having a predetermined form factor; b) a first auto ID reader supported by the support, said first auto ID reader operative for sensing encoded data on a first type of record carrier positioned near the first auto ID reader and for reading the encoded data; c) a second auto ID reader supported by the support, said second auto ID reader operative for sensing encoded data on a second type of record carrier configured to contact a portion of said second auto ID reader, said second auto ID reader further operative for reading the encoded data; and d) a radio frequency (RF) transceiver supported by the support, and operative for transmitting the data processed by said first and second auto ID readers derived from the first and second type of record carriers; wherein at least

Art Unit: 2876

one of said first and second auto ID reader is an interchangeable module that is interchanged with modules including: a bar code symbol reader module, a smart card reader module, a digital sensor module, a biometric sensor module, a magnetically encoded data reader module, an RFD reader module, and an optical code reader module.

Ruppert (US 5,640,002) teaches a data collection module, comprising: a support having a predetermined form factor; an auto ID reader supported by the support, and operative for sensing encoded data on a record carrier positioned near or in contact with the reader and for generating first signals relating to the sensing; a radio frequency (RF) transceiver supported by the support, and operative for receiving and processing data from a remote source and generating second signals relating to the processing; and a signal processing circuitry including shared circuitry for processing and digitizing the first and second signals.

Bridgelall (US 6,415,982; hereinafter "Bridgelall '982") teaches a device having a support, a plurality of data collectors on the support for collecting a plurality of data; an actuatable transceiver on the support, for transmitting the plurality of data by wireless communication to a host remote from the support; and a triggering circuit for independently, manually actuating the transceiver to transmit one of the data during a first actuation of the triggering circuit and to transmit another of the data during a second actuation of the triggering circuit.

However, Ruppert and Bridgelall '982, taken alone or in combination thereof, fails to specifically teach that a signal processing circuitry including at least one component for receiving, processing and digitizing the at least one first and second analog signals, wherein a

Art Unit: 2876

component of the at least one component performs at least one of signal processing and digitizing on signals included in both of the at least one first and second signals.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
